RUNNING

SZIOLS[®]
The serious sports glasses.[®]

SZIOLS XKROSS 3 RUNNING

Specially designed and engineered for Runners, Nordic Walkers and Mountain hikers. The lenses provide exact and fast recognition of all uneven and rough terrain.

This translates into relaxed running and security of each single step – especially in forest areas and shade in the mountains. The XKross 3 Running provides highest comfort while wearing and protects the eyes against glare, sweat and wind.

ACM

ACM ANTI-FOG PROTECTION

While running, the body heats up tremendously – especially around the eyes, the heat congests easily and the lens fogs up. Through the 6 holes technology around area of the nose, the congested heat will be diverted.

The specially designed front lens (Curve 6) opens the filter towards the upper and side area. Combined with the 4-slots of ventilation, the wet and heated air can divert and the lens filter will be kept fog-free.

NEOPRENE PROTECTION

During active running many sportsmen and women develop a strong flow of sweat on the forehead. This sweat is distasteful and burning when it floats into the eyes. With the neoprene sweatband in place, the sweat will be diverted to the side of the head. Bright light from above and penetrating cold air will be blocked. The skin friendly neoprene material can be easily cleaned.

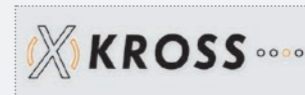

AFTER SPORT FRAME

Especially for those who have to wear glasses, all XKross Sport Frames can be equipped with an Rx-able optical inner frame. This can be easily clicked into an After Sport Frame.

THE SZIOLS XKROSS-SYSTEM

ONE PAIR OF SPORT GLASSES – MANY POSSIBILITIES FOR MANY DIFFERENT SPORTS.

XKross is the sports glasses system consisting of one frame and several choices of lenses. Designed to meet the requirements of sportsmen and women, the XKross System is tailored to the demands of the individual sport.

The Filters

Going running and hiking in fresh air the active sportsmen is confronted often with fast changing light conditions. In forest and shadow areas the filter is not supposed to be too dark. It is very important that the ground conditions are easily and well visible, so that no "dark wall effect" may occur. That provides safety during running and saves energy – which can be used for all sports. All lenses in SZIOLS Sport Frames provide all color tints with the highest 100% UV 400 Protection (DIN 3860) and are made of nearly unbreakable Polycarbonate Material with highest safety level (i.e. branches from trees, and other foreign objects).

CRISTALL CLEAR

Especially effective in the early, low-light hours of morning and early evening, or daytime with heavy clouds.

NEUTRAL CLEAR

Ideal for night runs so that all light available is captured and the eyes are protected from foreign objects.

CONTRAST BROWN

Highest contrast combines with strong glare protection (Category 3-4). Should be used in highest level of sun and for those who are sensitive to glare.

ACTIVE RED

Specially developed red-toned filter for professional and competitive athletes, which can be used short-term in competition for increased power and performance. Not only does the active red have a contrast increasing effect (more security) but also influences the muscle tones (higher performance).

ACTIVE ORANGE

Well-balanced filter, with best Glare protection (Category 2-3) combined with high contrast vision. Becoming lighter towards the bottom it allows optimum recognition of terrain conditions (also available without mirror coating). High visibility when light conditions are changeable.

ACM

Temperature, Wind and Light conditions represent the biggest problems. The Air Circulation Management ("ACM") by SZIOLS is the one and only technology which provides solutions for the demands of the individual sport.

AFTER SPORTS FRAME

Additional frame in which the Rx-able optical Inner frame can be easily clicked into the After Sports glasses frame.

Panorama Shield

D.P.X.™ XKROSS

KEY-LENS CHANGING SYSTEM

Combines frame, lens and the optional Rx optical Inner Frame. The D.P.X. key system allows lenses to be changed quickly and easily – according to the different needs of lens for the different types of sports and/or conditions.

Nobert Coenders, Ironman: "I used the XKROSS 3 Running for the first time in the Ironman 2004 – I really felt like I was wearing something reassuring on my face."

Brahim Chalgoum, international long-distance runner: "Even in the toughest conditions, they can fulfill all the requirements and provide perfect visibility."

Ruedi Wild, European U23 triathlon champion: "I wouldn't be without the XKROSS any more, especially for the last few meters. The active orange is my killer lens."
